Element-proof TV specialist Aquavision announces a new line of exterior TVs-- Horizon, a range the company claims can withstand nearly all extreme weather conditions.

Based on the Nexus+ and Elite 4K range, Horizon TVs feature reflective LED screens designed for optimum viewing even in the brightest sunshine. They are IP65 rated against water, dust, sand, moisture and insects, and are ideal for marine, pool or patio locations. Aquavision says the TVs operate in temperatures ranging from -40° to up to 110° C

VESA mounts come as standard, while control comes through IP, RS232 and discrete IR. Connectivity includes x2 HDMI and x2 USB ports.

“We’ve been developing this outdoor range for a while and are really excited about the Horizon,” the company says. “It combines much of the technology from our top of the range in-wall sets with the added benefits of the ultra high brightness levels of 350-2500 cd/m2.”
