Sonos accessory specialist Flexson presents an adjustable TV stand for the Playbase-- a flexible means to allow customers to neatly integrate the Sonos audio solution with virtually any TV.

Built out of aluminium and steel, the stand holds TVs up to 65-inch in size weighing up to 45kg. Users can adjust the height, depth and angle of the TV to suit individual viewing needs, and a customisable cable management solution is included.

“The Sonos Playbase is a fabulous way to make more of your TV sound, and we’ve created a high-quality accessory to help users get even more from it," the company says. "Our adjustable TV stand allows users with all kinds of TVs-- even the larger sets, which may not otherwise fit on a soundbase-- to create a seamless yet flexible sound and vision centre.”

The Flexson adjustable TV stand is available in white and black finishes matching the Playbase.
