If TVs get thinner, what about the mounting?

If your customers tire of TV screens that stick out from the wall, at IFA the consumer brand of Milestone AV Technologies, the largest flat panel TV mount manufacturer worldwide, releases two new Sanus Super Slim full-motion mounts.

The Holy Grail of mounting is to be as flat as the wall and the new Sanus VMF322 and VLF320 Super-Slim full-motion mounts place flat-panel TVs very, very close to the wall while still offering full-motion capabilities.

The Super-Slim Sanus design sits just 1.4" (3,56 cm) for the VMF322 and 1.23" (3,12 cm) VLF320 from the wall, accentuating that Twiggy-look of the latest ultra-thin TVs.

Your customer can still easily tilt TV with the touch of a finger, and these models extend 22" (55,8 cm) for the VMF322 and 20" (50,8 cm) for the VLF320 from the wall.

An integrated cable management system hides all the wiring and cabling within the extension arm. Decorative covers conceal mounting hardware for a finished look. Post-install levelling adjustments ensure TVs are perfectly positioned after hanging.
