# Combining Mounts with Wireless Streaming

Written by Marco Attard
18. 01. 2012

Peerless-AV integrates mounts with wireless streaming with PeerAir-- a mounting solution range capable of streaming A/V content to flat panel displays and projectors.

Debuting at CES 2012, PeerAir mounts stream 1080p 60Hz content for distances of up to 100m, eliminating the need for running cables while opening new possibilities for display and projector placements.

The range includes indoor and outdoor wireless articulating arms, tilt wall mounts, a mobile cart and a wireless projector mount, all with a built-in wireless A/V transmitter.

Powering the mounts is the included Peerless HD Flow Wireless Multimedia Kit, with features including reverse IR remote control, multi-casting from a single transmitter (for up to x4 devices) and WPA2 security protocols.
