Omnimount will launch 3 additions to the ActionMount full motion TV mount range at ISE 2012-- the PLAY20, PLAY20X and PLAY40.

Using Ergotron Constant Force technology for light-touch omnidirectional TV movement, Omnimount says ActionMount products allow users to raise or lower their TVs by up to 53.3cm.

One can also position each mount for the ideal 3D angle (with a 180-degree pan range) without need for precise installation. Construction is in polished aluminium, with black trim for additional style.

Each mount includes a complete hardware kit, while the mount arm carries cable management clips for the routing and hiding of wires.
