

Philips Reveals 2012 TV Range

Written by Marco Attard
21. 02. 2012

Philips announces TV offerings for 2012, with updates to the 6000 and 7000 series (PFL6007 and PFL7007) HD LED 3DTVs, all packing Smart TV, built-in wifi and dual-view full-screen 2-player gaming options.

The dual-view system allows 2 players to see different images on screen by splitting the 3D signal. It is found on a few other TVs, such as the Sony Playstation 3D Display.

Both 6000 and 7000 series also carry passive polarisation technology for 2D to 3D conversion, complete with 3D depth adjustment.

Being the higher-end of the two, the PFL7007 has an 800Hz motion rate, Philips Pixel Precise HD processing and uses active shutter glasses for 3D images.
