Sanus is shipping the VMA401-- an on-wall component shelf with thick tempered-glass construction mounting directly below HDTVs.

Supporting weights of up to 7kg, the VMA401 holds DVD players, gaming systems, cable boxes or audio gear and features an integrated cable management system hiding and organising cables.

The vertical column is 1.34" (3.4cm) thick and includes a micro-adjustment feature so it can be fixed to level with all sorts of walls. Installers can also combine multiple VMA401 units to create multiple shelf solutions.

The package includes all hardware for installation on sheet rock, wooden studs or concrete.
