Screen Innovations (SI) will demo a new projection screen and material lineup at ISE 2013-- including the new Black Diamond Zero Edge G2 screen.

The Black Diamond Zero Edge G2 is the only multi-directional ambient light rejecting projection screen available, SI claims. It features a rigid panel, 10mm bezel and Black Diamond technology boosting projector contrast by up to 900%, all with the look and feel of a flat panel TV.

Other features include a redesigned frame with improved structural support and an integrated track system allowing the inlay of optional perimeter LED lighting behind the screen.

The shipping cartons also see improvements, providing freight cost reductions by over 65% on average according to SI.

Black Diamond Zero Edge G2 screens are available with black .8 gain, dark gray 1.4 gain or silver 2.7 gain materials, and are ideal for light or dark room applications.
