BenQ's **SH940** is a native 1920x1080p resolution DLP projector that's specified at 4,000 lumens and a contrast ratio of 50,000:1.

Included with horizontal and vertical lens shift, 2D keystone correction and throw ratios of up to 2.43, the SH940 is ideal for both professional and home theater applications since it includes x2 HDMI and x1 VGA ports in addition to x5 BNC (RGBHV) for connecting systems the old-fashioned way.

To reduce energy costs, power-saving features such as an "Eco Blank Mode" allow presenters to blank out the projection screen whenever the projector is not in use, while a standby mode will lower power consumption to less than 0.5W while the SH940 is inactive. Lamp replacement has also been made extra easy with access from the side or top of the projector while a filter-free optical system and BenQ's no color decay further reduces the TCO of the device.
