Acer announces the European availability of the "H" 3D projector series-- a product family consisting of the H9501BD, H7532BD, H6510BD and H5370BD projectors.

Ideal for home theatre applications, all H models support Blu-ray 3D, DLP 3D and Nvidia 3DTV Play technologies, while Acer 2D-to-3D technology converts 2D HDMI signals into 3D video.

As well as HDMI the projectors include MHL capability, allowing connectivity with compatible wireless mobile devices.

The Acer H projector series will be available in EMEA from April 2013.
