Wolf Cinema launches the SDC-15 2D/3D (stereoscopic) 3840x23160 resolution projector, one complete with hand-matched D-ILA panels (LCoS) and custom-crafted gamma curves.

It natively projects most film aspect ratios (up to CinemaScope 2.35:1/2.40:1) without need for an external anamorphic lens. A 230W NSH lamp promises 4000 hours of life at 1300 ANSI lumens output.

The centre-mounted lens features a "VAriScope" memory system with 10 display aspect presents.

Inputs include x2 HDMI 1.4a, VGA and component video together with IR, LAN and RS-232 for control, all housed inside a massive (48x55x20cm) black gloss box.

Wolf Cinema also offers an optional 3D starter pack (with 3D signal emitter and x2 pairs of active glasses) and WC-PM-M ceiling mount kit.
