Elite Screen launches the Aeon UST (Ultra Short Throw)-- an EDGE FREE fixed frame screen featuring the StarBright CLR (Ceiling Light Rejecting) material.

StarBright CLR has a serriform microstructure the company claims absorbs up to 95% of overhead lightning. The result eliminates washout, creating a clear image specifically for tabletop-mounted ultra short-throw projectors. In addition the material promises contrast levels up to 100 times greater than standard matte white projection screens.

The projection screen offers wide 180-degree viewing angles, neutral colour temperature and enhanced picture contrast in a theatre-grade image, without the glare associated with flat panel displays. The EDGE FREE design incorporates a wrap-around material over an internal framework with optional bezel, while an LED back-lighting kit provides aesthetic mood lighting when the screen is not in use.

The Aeon UST is available now in a 16:9 HDTV format.
