Wolf Cinema announces a pair of flagship projector and processor ensembles built around 6th generation 3-chip D-ILA light engine technologies at CES 2016, as well as upgrades to 4 existing projectors.

The 2 flagship projector additions combine the SDC-12 and SDC-15 models with a custom outboard ProScaler MK IV video processor. Dubbed the SDC-12 Ultra 4K and SDC-15 Ultra 4K, the projectors deliver an expanded feature set and processing prowess to deliver images up to 4.3m in width.

The 4 existing platforms-- models SDC-8, SDC-10, SDC-12 and SDC-15-- now feature UHD/4K video compatibility through 18Gbps HDMI 2.0 inputs with HDCP 2.2 compatibility. The projectors also include a 30% increase in peak white levels over previous editions (to 1900 ANSI lumens), up to 1500000:1 dynamic contrast ratio, full HDR compatibility, VariScope aspect ratio memories and custom factory gamut and gamma calibrations.
