

Draper Claims Biggest Thin Bezel Screen

Written by Marco Attard

The redesigned Draper Profile fixed screen has a bezel frame just 1.3cm thick while still being available in sizes up to 9m wide-- making it perfect for both home AV and digital signage applications wanting a "flat panel look."

The company adds size is not the only advantage of the Profile screen-- the redesigned frame is also 30% lighter, making it easier to assemble. Viewing surface attachment should be simple via new sliding hook-and-loop system, while optional LED lights frame the Profile with thousands of colour possibilities.

The Profile is also available as a Zero Edge screen by simply removing the outer trim.

Draper is to officially launch the Profile redesign at CEDIA Expo 2016.
