dnp launches the Supernova Flex Classic-- a screen using the company's ISF certified 08-85 Supernova material able to roll up and down quickly at the touch of a button via noiseless electric motor.

Available in 100- or 120-inch sizes in 16:9 format, and 100- or 110-inch in 16:10 format, the screens are mountable on walls or ceilings, and are ideal for residential, meeting/conference room and educational applications. A dark grey drop above the image areas allows the retractable screen to roll down to the desired height, and it is compatible with all standard projectors, including 4K projectors.

The company promises the screen can handle clear and vivid images with full colour saturation, regardless of viewing angle. Control comes through included IR remote, and a potential free contact closure is included via RJ45 socket.
