Optoma launches the HD39Darbee-- a portable HD projector ideal for movie fans and gamers featuring Darbee Visual Presence image enhancement for increased contrast and colour saturation.

The projector weighs less than 3kg, and can be carried around in an optional carry bag for any event or gaming session. It is also small yet bright enough for media room installations, with brightness reaching 3500 lumens and fast response time of 16ms.

Resolution clocks at 1080p, while the Rec.709 colour depth is bolstered by Optoma Amazing Colour technology. A variety of preset modes and settings allow users to match any application or environment, and a 1.6x zoom with vertical lens shift simplifies positioning for a wide choice of screen sizes.

Connectivity comes through x2 HDMI ports, and the addition of an Optoma WHD200 wireless HDMI link allows video streaming from up to 20m in any room. It is compatible with the Google Chromecast, Amazon Fire and Apple TV. An integrated speaker delivers 10W of audio, while an audio output allows connection to an external sound system.

“The new HD39Darbee combines the innovative and engaging Darbee Visual Presence processing with high brightness, a large zoom range and vertical lens shift,” Optoma says. “This ensures a larger range of installation possibilities.”
