Salamander Designs and Screen Innovations announce a partnership aimed at both residential and commercial installers-- one with support for turn-key packages for Ultra-Short Throw Credenzas and the Solo Pro motorised screen line.

The combination of the Salamander Ultra-Short Throw Credenzas and the SI Solo Pro (plus optical "SI" material suited for ultra-short throw projectors) makes it simpler for installers to deploy display solutions in close quarters in homes, offices and classrooms.

Salamander projector credenzas feature an aluminium support chassis, flush top surface, recessed projector cavity design and active cooling system, plus built-in louvers to vent warm air and keep equipment cool. Like all Salamander furniture, the projector credenzas are available in a full array of current colours and finishes, and can be custom configured with rapid deployment for integration partners, designers and customers.

Meanwhile the Solo Pro screens are the first motorised screens with the SI Short Throw Material and a choice of 2 motor options, either lithium-rechargeable or low-voltage (24v). As such, no electrician or special wiring is required. They are available in sizes up to 100-inch diagonally (in custom ordered 1-inch increments) and with 12 designer-selected colour options to match customer decor.
