Optoma announces a successor to the popular HD29H projector-- the HD29HST, a short-throw projector offering 4000 lumens brightness able to project a 100-inch from just over 1m away.

The HD29HST features two HDMI inputs, allowing connection of a laptop, PC, Blu-ray player, media streamer or games console. A single button press allows switching between sources. Customers can even turn it into a smart projection by connecting a dongle such as the Google Chromecast, Amazon Fire TV or Apple TV in order to play games, stream videos or share photos on the big screen. An integrated 10W speaker provides audio.

"With a latency of just 8.4ms and the ability to accept a 1080p 120Hz signal, we developed this compact short-throw projector with gamers in mind," the company says. "As well as the lightening refresh rate, the HDR imagery allows you to see far more detail and texture. Objects look more lifelike, and the extra detail creates a greater sense of depth."
