Digital Projection unveils its M-Vision Cine 400-3D at ISE 2011-- a single-chip DLP 3D home projector.

It has 6000 lumens brightness, with 30% horizontal and 120% vertical lens shift range. It is ideal for screens up to 3.5m wide, with 1920 x 1080 display.

Multiple lenses are available (with throw ratio ranges from 1.25 to 3.0:1), alongside a fixed lens version (with 0.73:1 throw ratio).

With its relatively compact and lightweight form factor, Digital Projections positions the 400-3D as an entry-level high-brightness 3D projector.
