

SilverStar 3D-P Makes CEDIA Debut

Written by Marco Attard
30. 08. 2011

Vutec introduces its latest projection screen at CEDIA Expo 2011-- the SilverStar 3D-P curved screen.

Targeting the growing demand for passive 3D technology, the Silverstar 3D-P has a patented silver-based material providing what Vutec says is its best 3D (and 2D) performance yet.

The material increases colour saturation and contrast in both controlled and uncontrolled lighting environments-- while reducing brightness by around 50%-- through internal filtering components combining with the 3D glasses viewers wear.

It also delivers a seamless wide viewing area, in sizes of up to 181" (in 2:35:1).
