Indy Audio Labs brand Acurus joins the Cinema Designer (TCD) manufacturer database of home theatre design software, allowing installers and delaers using TCD to add Acurus home theatre processors and amplifiers in their designs.

TCD allows one to design everything from small media rooms right up to high render channel count immersive audio home theatres. It brings the entire cinema design process, from creating 3D CAD drawings and 3D renders to working out the mathematics associated with technically correct cinema and media room design, in a single place, automatically updating calculations and ideal equipment placement in real-time.

The software is usable anywhere in the world, allowing home cinema professionals to design any dedicated cinema or media room quickly. According to the company, TCD creates peer-review standard cinema designs and full documentation, allowing users to produce technically impeccable theatre and media rooms with predictable results.

"The Cinema Designer brings a new level of efficiency, acoustic parametric design, professionalism and awareness to the entire personalised cinema design process for the premium customer," Indy Audio Labs says. "It really does remove the pain for both the integrator and the end consumer and replaces it with relevant technology that is fast and very cool to use."
