Atlona joins the D-Tools Cloud and i3 (Industry Information & Insight) Program, providing D-Tools software users access to detailed Atlona product specifications and related information.

The D-Tools Data Library already offers over 153 products, with information for use in sales, system design, documentation, procurement and project management of low-voltage systems.

“Atlona continues to seek new ways to simplify complex projects for our integration partners, and our contribution to the D-Tools user community will help to accelerate product decisions, ordering, and other front-end responsibilities that might otherwise delay installation,” the company says. “Added to our unrivaled 10-year product warranty, extensive training and certification initiatives, free design services, and 24/7 global technical support, aligning with D-Tools is yet another means of amplifying our customer-first message and approach.”

As D-Tools Cloud and i3 partner, Atlona gets access to product download analytics to analyse and measure the product pipeline. With hundreds of program vendors on board, D-Tools offers the largest aggregated product database for installers, technology professionals and retailers worldwide.
