AudioControl announces key product information-- including detailed product specifications and unique dealer pricing-- is now available for installers and home theatre specialists on the D-Tools Cloud.

"Our objective in making this data easily available in the D-Tools Cloud is to support our dealers by improving project efficiency, enabling them to have fingertip access to our complete line-up and thus win more bids," the company says.

D-Tools Cloud intuitively guides users from managing sales prospects, through quoting, system design and procurement. The SaaS application features sales pipeline and opportunity management, in-app collaboration, workflow management and guidance, ordering, browser-based drawings, critical business analytics and interactive multimedia proposals, all accessible from any web-enabled Mac, PC or tablet.
