A new contender enters the European AV and custom installation markets-- Sun-Light Solutions (SLS), distributor of advanced residential lighting and heating solutions.

SLS is exclusive amBX technologies dealer, a lighting system combining coloured LED lights, translucent stretch ceiling fabric and amBIENT XC DMX lighting controllers.

According to SLS amBX lighting is ideal for all kinds of scenarios, be it home theatres and media rooms or kitchens and bathrooms.

Other lighting options from SLS include DMX LED downlights, available in RGB, RGBW and White, RGB LED flex and different forms of White flex, and a range of wireless and battery-powered DMX fixtures with custom housings.

SLS also offers Welltherm Heating infrared panels-- a heating system that warms objects, not air. The panels are designed to integrate into a variety of environments, being wall- and ceiling-mountable and customisable with artwork designs.

A wireless thermostat control range complementing the Welltherm portfolio will be available in the near future.
