

EMEA distributor Amber International adds adds racks to its portfolio-- Forge Racking Solutions, makers of racking solutions ideal for installations in limited spaces.

Forge offers ultra-thin (485mm wide) floor standing and wall mounted racks wide enough to accommodate all modern AV equipment, with 13-gauge top and bottom panels providing strength and stability and 11-gauge front and rear rails with conveniently numbered (10-32 threaded) spaces.

Racks include front top and bottom trim panels for a more pleasing look.

The company also offers a PC rack configurator-- software allowing installers to build rack setups virtually before presentation to customers. It comes complete with step-by-step configuration wizard, front, side, and rear views of created rack setups and various measuring and labeling features.
