

SurgeX International publishes a white paper that should be of interest to our readers-- Power and Grounding for Audio and Video Systems: A White Paper for the Real World.

Written Audio Systems consultant Jim Brown, the 43-page paper is a guide to the correct connection, distribution and grounding practices of 120/230-volt AC power platform implementation.

"The implementation of proper AC power and grounding practices for integrated systems is commonly overlooked," SurgeX says. "There are only a handful of IT/AV consultants on the planet that understand these issues at the level Jim [Brown] does, and his course at InfoComm has become a requisite for professionals looking to secure CTS status and beyond."

Brown adds the document should "ultimately help customers design trouble-free AC power platforms for complex integrated systems."

The white paper is available as a free download from the link below.
