ITC (Instant Tool-less Connectors), a division of The Quest Group (parent of AudioQuest), says its tool-less line of connectors will be represented in Russia and CIS by the Marvel-Distribution Company.

Current crimp and compression termination systems require multiple tools or dies but not ITC's connectors. ITC tool-less system reduces termination time, complexity, and failure rate to save time and money.

Based in St. Petersburg, Marvel-Distribution, for 17 years one of the region's biggest broad-line distributors of A/V and computers, has a dealer network of 2160 companies in 130 Russian cities.
