

AWE in UK has been appointed as an authorised distributor for Lutron lighting control systems.

AWE will be focussing on Lutron's Rania single room dimmers and the new modular GRAFIK Eye QS whole house lighting control system. AWE will be providing training of Lutron lighting control systems to ensure that installers get the most from their AWE purchase.

“Lutron is an exciting addition to our portfolio and takes AWE into a new product category” explains Stuart Tickle, MD at AWE. “The GRAFIK Eye QS has a dedicated ProntoScript module enabling pre-set scenes of lighting and shade control to be operated, and it can obviously be operated from anywhere in the home. The 2-way feedback confirms system status, for example whether your house security lights are on.”

For custom installers, AWE highlights the benefits of installing a lighting control system: As well as adding value to an install, there are energy savings to be made achieved by intelligent setting of lighting scenes. The security benefits should not be underestimated either; timed lighting settings (e.g. holiday mode) and an activation setting triggered by an alarm is an excellent deterrent to intruders. And the convenience of zonal settings such as ‘all off’ and modes such as ‘night time’ or ‘go to the bathroom’ are a great selling point for installers.

Lutron Signs on AWE
