Key Digital and IC Realtime announce native Compass Control system integration for a number of IC Realtime surveillance DVRs, including the Flex series, Elite series, NVR700N and NVR700S2P.

IC Realtime is already a Compass Alliance Partner, having worked with Key Digital on the bi-directional drivers handling DVR control and feedback from the devices.

Compass Control is a control system designed around iDevices. It provides installers with bi-directional IR, 2-way RS232 (with feedback) and 2-way TCP/IP control. The new drivers are part of the design software.
