

No PC or Tablet for Lorex Security

Written by Marco Attard

The latest Lorex security webcam does not need a PC or tablet to operate effectively-- the LWX3451X Wireless Home Monitor ships with an own handheld 4.3-inch display handling feed viewing duties.

Setup also requires no PC, since an included Wifi Cradle takes care of connections with home wireless networks. Once the Cradle connects to a wifi network, customers just need to dock the monitor to view video either remotely or locally.

Smartphone and tablet owners can replace the monitor with an iOS and Android Lorex Care app.

The camera features motion tracking, remote controllable pan/tilt, night vision, built-in rechargeable lithium battery and 2-way audio between camera and monitor.

Customers can expand the system to up to 4 cameras, providing additional camera channels.

The LWX3451X is available now.
