

Touchscreen Variant for Kwikset Lock

Written by Marco Attard

Kwikset reveals an updated version of the SmartCode 914 deadbolt lock at ISC 2014-- one featuring a touchscreen and UL certification.

The touchscreen allows customers to activate the lock with a simple touch. It automatically detects correct codes and, of course, unlocks doors.

A dedicated button allows for one-touch locking, while Home Connect technology (in both Z-Wave and Zigbee versions of the lock) handles integration with other home automation components.

The lock saves up to 30 user codes, with SmartKey technology for quick re-keying without need to remove door locks and BumpGuard prevents lock bumping.

Construction is in metal with BHMA and UL certification for a 20-minute fire rating.
