---

The Belkin NetCam HD+ is a wifi camera providing customers with 720p resolution footage via PCs and mobile PCs, as well as cloud storage, easy setup and compatibility with WeMo home automation ecosystem.

WeMo compatibility allows one to set rules or connect activities with other WeMo products via the WeMo app-- for example pairing the NetCam with a WeMo Switch to turn on a lamp when the camera detects motion.

The NetCam features a wide-angle glass lens, night vision and a built-in microphone for 2-way conversations while checking what is going on in the house.

A premium cloud storage service allows users to check and store footage on a subscription basis.

Belkin says setup is easy enough using any iOS/Android device, free NetCam app and a wifi router, with no PC required.
