Security vendor Smanos announces the European availability of the W020 Wifi Alarm System and the IP6 HD Wifi Camera, a pair of devices first announced back at CeBIT 2015 in Hannover, Germany.

The W020 is a next generation wireless security hub. It connects to a wide array of wireless sensors and accessories, including door/window contacts, PIR motion sensors, security cameras, and flood, gas and smoke detectors, making it deal for consumer and SMB customers.

It not only alerts others to intrusions or environmental anomalies but also sends push notifications to mobile devices. Setup is simple, since one only needs to plug in the power, download the free iOS or Android app, set up wifi with Smart Link and pair wireless sensors or accessories.

The mobile app also handles system settings such as siren volume and time, exit/entry delays and sensor additions or deletions.

Meanwhile the IP6 camera features a built-in microphone and speaker for 2-way audio communication together with an industrial-grade Sony image sensor promising sharp video footage even in low-light conditions.

The systems are available either separately or as a bundle package.
