D-Link announces an addition to the mydlink Connected Home series-- the DCS-8200LH, a 180-degree wifi camera featuring IFTTT support and a microSD card slot for local recording.

The camera records video at 720p resolution and pairs with other mydlink connected home devices. Control comes through the mydlink Home app, with IFTTT (If This Then That) support allowing integration with other app as well as the creation of automated routines through conditional commands.

For example, one can create an IFTTT recipe having the DCS-8200LH automatically start recording whenever the home owner leaves the house, or take a snapshot whenever the doorbell rings. The app also allows the remote checking of live or recorded footage via smartphone or tablet.

Other camera features include 802.11ac wifi connectivity, de-warping technology for optimal video quality, sound and motion detection, and night vision via built-in IR LEDs.

The DCS-8200LH is available from July 2016.
