Legrand announces an addition to the Bticino Classe 300 video door entry system range-- the Classe 300X connected video internal unit, a handsfree device complete with 7-inch touchscreen.

The Classe 300X uses integrated wifi connectivity and offers quick 2-wire installation, making it ideal for both new developments and the replacement of existing 2-wire devices. The touchscreen makes it a modern door entry solution and allows connection to wider functions and services, such as security cameras or lights.

A companion Door Entry app allows communication between video internal unit and smartphone, with simple controls and even a help button.

“What truly sets the Bticino system apart is its ease of installation and ease of use," Legrand says. "A simple connection to the wifi network and a straightforward 2-wire installation, make the system an accessible addition to the modern home. The Bticino Classe 300X acts as the ideal entry point for smart home functionality thanks to its simple installation and the potential to add additional functionality and services.”
