

Lilin Intros External HD IP PTZ Dome Camera

Written by Marco Attard
26. 04. 2017

Lilin presents the PSD4624EX20/30-- an external HD dome camera able to record 1080p video at 60fps, with 360-degree continuous rotation and a choice of brackets for flexible installation.

The camera features wide dynamic technology, allowing it to capture highlights and shadows simultaneously while eliminating pixilation and smear. This is combined with 3D noise reduction and adaptive tone reproduction for improved image contrast in bright and dark areas.

Installation promises to be easy-- installers simply need to connect the camera to a Lilin NVR, and the WS Discovery installation wizard locates all IP cameras on the network and generates a snapshot image of each channel, making identification simpler and speeding up commissioning. The camera can be either wall or ceiling mounted with a choice of brackets.

The free LilinViewer mobile device app provides remote camera control and viewing. The camera is also compatible with a range of control systems from the likes of Control4, Crestron, AMX, Savant, Elan, RTI and URC, and is supported by drivers. It also supports ONVIF Profile S.
