Metra Home Theatre starts shipping its new line of hybrid surveillance DVRs, with options for 4-, 8- and 16-channel DVRs available with or without hard drives.

The 16-channel hybrid DVR (SPY-DVR16HYB2) provides dealers with more flexibility, thanks to compatibility with 4 types of video technology-- namely AHD, TVI, analog and IP. Dealers can use any combination of video technology across all 16 channels, combining 4 components into one versatile system.

In addition, the 16-channel DVR is available either with or without a hard drive (SPY-DVR16HYB2ND), allowing dealers to offer a customised storage solution and create a larger profit margin for services. The 16-channel DVR features robust 1080p resolution recording and playback quality, with up to 15fps for TVI, AHD and analog, and up to 25fps for IP.

As mentioned earlier the DVRs also come in 4- and 8-channel options, with or without hard drives. One can use the DVRs with the free Spyclops Surveillance Systems app, allowing remote viewing and monitoring of functional cameras from desktop PC, tablet or smartphone, the Spyclops app is available for both Android and iOS devices.
