Home security vendor Blink announces the Blink Video Doorbell ahead of CES 2018-- a wire-free device promising a 2-year battery life through a pair of standard AA lithium batteries.

The Blink Video Doorbell offers a suite of features similar other such products, including video alerts, motion detection, live streaming video with 2-way audio, infrared night vision and IP65-rated weatherproofing. Installation should be as easy as placing it anywhere it is required after connection to wifi, and customers can connect it to existing doorbell wiring to make it sound like the existing doorbell chime.

It can be added to existing Blink systems without need for additional hardware or software, while airing comes through the companion iOS/Android Blink Home Monitor app.

"We've taken our award-winning experience from our security cameras and applied it to the doorbell," Blink says. "We feel this has resulted in the absolute easiest to install, full-featured video doorbell on the market today. Combined with our existing wire-free cameras, consumers will have peace of mind that their entire home is safe when they are away."
