RTI control system get integration with another product-- the August Smart Lock Pro, thanks to the addition of the RTI ZW-9 Z-Wave interface module and the RTiPanel app.

The ZW-9 uses the Z-Wave wireless protocol to provide communications between an RTI system and the Smart Lock Pro. Combined with an RTI XP processor, this allows users to lock and unlock the deadbolt, as well as monitor lock status and battery level, via RTI user interface, be it a handheld touchscreen controller, tabletop touch panel or smart device app.

"We continue to deliver seamless integration with more and more Z-Wave enabled devices, and we're proud to have the August Smart Lock Pro on our list of supported smart home products," RTI says. "On top of its beautiful design, the August Smart Lock Pro is an excellent retrofit solution for access control and easily integrates with an RTI system."

RTI also offers a range Z-Wave-enabled lighting solutions, including light switches, dimmers, a lamp module, and receptacles. These need no new or specialised wiring, and are thus ideal for retrofit applications.
