Vue's wireless camera system makes it simple for customers to set up and use. Wireless battery operated cameras connect to a gateway (plugs into router or modem). Users can check their camera feeds online through personal vuezone.com account (requires yearly subscription).

The wireless cameras transmit up to 100m to the nearest gateway. They mount on custom sticks via magnetic mounts, and easily relocate as needed. The cameras shoot video in flv at up to VGA resolution, and use FrameMesh wireless video encryption. Vuezone says battery life is up to one year under normal usage.

The personal video network starter pack contains 2 wireless cameras, 4 camera mounts, 1 gateway and 1 year's free subscription to a vuezone.com account. After 1 year, the vuezone.com account requires a yearly subscription for 2GB of video storage. Accounts can be shared as the user requires.

1 gateway syncs with up to 50 cameras, and a network takes up to 3 gateways.
