---

Nortek Security & Control (NSC) announces the addition of the 7-inch e3 Entry System to the Linear line of access control and telephone entry solutions.

The browser-based Linear e3 Entry System is a touchscreen-based system with a full query keyboard, minimising the number of steps. Dealers save time with an easy-to-install solution equipped with an intuitive installation wizard and one common database and programming interface to configure.

The 7-inch weatherproof product features a larger touchscreen with a self-adjusting sensor, making it easy-to-read both during the day and night, as well as in rain, sleet and snow. The display is paired with a stainless steel keypad featuring recessed illuminated blue keys and a polycarbonate home key with white backlighting.

Also included are a motion sensor, ambient light sensor and (optional) HD IP camera, together with a built-in postal lock and 3-point locking mechanism for added security. Digital signal processing adds noise reduction and voice clarity, while the faceplate is engineered with Linear ArmorTech polycarbonate and stainless steel for durability.
