RTI announces an integration with the Channel Vision Technology Elite Series SI-1000 front door station-- allowing customers to use with with RTI control devices featuring intercom capabilities.

The SI8000 features a built-in IP cameras allowing users to receive video calls when visitors ring the doorbell. An integrated strike provides the capability to unlock the door. Through integration with the RTI ecosystem residents can answer and unlock the door from intercom-compatible RTI controllers.

RTI devices with video intercom support include the KX10 in-wall touchpanel and CX10 countertop/under-cabinet touchpanels. In addition, the RTI KX3 and KX7 in-wall touchpanels, CX7 countertop/under-cabinet touchpanel and flagship T3x remote control provide audio intercom capabilities when integrated with the SI-8000.

“We are extremely pleased to have Channel Vision as an integration partner,” RTI says. “By combining Channel Vision’s popular IP front door station and the RTI control environment, our dealers can offer their clients the added convenience and security they desire.”
