Lilin has a showcase of security and surveillance solutions at ISE 2019, with premium products including the discrete MR6822 IR dome camera and the mini PTZ PZD6422X3 compact IP dome camera.

Designed as a discrete security solution, the MR6822 weighs less than 250g and is around as large as a tennis ball. Lilin claims it is the smallest IR dome camera in the world, even if it still features 1080p resolution at 30fps, a high and wide dynamic range for optimum image quality, integrated infrared illumination providing night vision to a distance of 30m and automatic tamper detection.

Another product on show at ISE is the mini PTZ PZD6422X3. A compact IP dome camera with a circumference of 12cm, it is 11cm tall and has 3x optical zoom, giving a focal length from 3.5 to 10.05mm. It also streams 1080p video at up to 30fps, and high dynamic range allows it to reproduce both highlights and shadows without smearing or pixellation. The 360-degree rotation, along with pan, tilt and zoom features allow users to view any angle via LilinViewer app, with both live and playback options.

A final camera is the ZSR8122LPR-- an outdoor varifocal IP camera with 1080p resolution at 60fps designed to work in the most challenging environments. It combines WDR, 3D noise reduction, intelligent image signal processing and built-in Sense-Up+ technology for outstanding images even in extreme low-light conditions. It is also IP66 rated to work in rain and dusty environments.
