Lilin announces a line of H.265 security cameras featuring the Sony Superior Star Light sensor to provide improved low-light and night vision performance, with either 1080p or 5MP resolution.

Available from Invision in a range of chassis options, including Turret, Dome and Bullet forms, the cameras can make part of a sophisticated security installation. They include Smart Alarms, giving installers the option to add conditions such as triggering relays, motion detection with customised areas, face detection, object counting, alarm/network and audio detection. Installers can then action the cameras to push notifications, record on SD card or NVR and trigger relays, among other functions.

“Lilin has taken a lead in the design, development and manufacture of a broad range of networking surveillance solutions,” Invision says. “The interest is growing in the CI market with clients wanting their CCTV solution integrated with their home automation controllers, and all within one app.”
