Samsung Techwin announces its DIY Security Systems, security products aiming for the home and SMB markets.

The systems are available in 4-, 8- or 16-channels and include a DVR with storage capacities starting from 500GB to 1TB.

Samsung's OmniView software provices a single user interface through which users can simultaneously manage an infinite number of systems set at multiple locations.

Meanwhile QuickConnect automatically configures the systems with a wireless network, allowing remote viewing via PC or smartphone. Users can also watch video from their security systems from their TVs.

The DIY lines offers box and dome hi-res cameras with night vision capabilities (up to 40'), IP66 weatherproof design and wireless/audio options.
