Mobi's latest offerings-- the MobiCam AV and MobiCam Internet Kit-- can combine to provide customers and their families security and instant monitoring.

The MobiCam AV is a compact 2-piece wireless a/v camera and monitoring system. With the camera and monitor coming in hand held format, users can easily move them to various locations as required. Transmission range is up to 300', and the camera has automatic night vision. The set also connects to TV or other A/V devices.

Meanwhile the MobiCam Internet Kit easily connects a MobiCam AV (or most other video monitoring set-ups) to the web, allowing users to monitor their security system from any internet browser or internet-enabled mobile phone. The system can stream live sound and video from up to x4 cameras, while allowing up to x3 simultaneous viewers on PC or phone. The Internet Kit also provides clients with either 2 hours of free online remote viewing per month, or an unlimited access plan via monthly fee.
