SurgeX crosses the pond as it releases its region-specific SX2200 series surge eliminators and power conditioners.

The SX2200 line provides surge protection and power conditioning for audio, video and computer equipment, with x6 ground industrial grade AC outlets on the rear panel (x5 switchable + 1 permanently on), together with front-panel courtesy outlet.

The SX2213 models are UK-specific (13-amp load-capable) and SX2216 models are Europe-specific (16-amp load-capable).

Three models are available in each range-- RT, RL and standard. The RL carries x2 XLR connectors for task lamps, while the RT has remote turn-on capability and a rear-panel Phoenix connector (for connection in master-satellite configuration with a controller).
