2gig Technologies' Go!Control Panel wins the Security Product of the Year prize at the CEA's Mark of Excellence awards.

Described as an industry first, Go!Control provides customers with an all-in-one security and home management system, with control access via either touchscreen panel or internet connected computer and phone.

The Go!Control panel built-in Z-Wave radio, enabling home automation functions such as HVAC or appliance and lighting control. Arming options come in "AWAY" or "STAY" modes, together with quick arm/exit and bypass features.

As a fully self-contained system, the panel contains a 24 hour backup battery and contains a snap-in GSM radio-- providing integrated 2-way voice with central station when it sends out a signal.

It allows up to x8 user codes to monitor up to x48 wireless zones and x2 hard wire zones. Via internet connection it also automatically updates itself whenever software updates are released.
