

**Safevision**, the security division of pan-European distributor **EET Group**, showed a number of new products from various suppliers at the ISE show, in the new **IP Security Pavilion**.

With analytics software from **Agent-vi**, video cameras can count people... for example, a person moving in a restricted area, cross line detection, suspicious object and many more. This software can even be used on already recorded material.

New camera technologies from **IQinvision** offered new remote focus functionalities.

And IR light from **Microlight** and **Teknosystem** let you see larger areas in total darkness.

Also **Sony**'s ultra low light IR Dome cameras range can even see license plates when the headlights from a car are facing straight into the camera.

For video management software, visitors could see and touch both **Milestone** and **Mirasys** software for handling camera installations and in combination with EET's own high end video servers/recorders (built from Supermicro components).

For entry and midrange area, the **NUUO** software and hybrid units combined the best of analog and IP into one unit.

Also value for money, the camera products from **A-soni** featured a good balance between price & quality.

With the latest with VSaaS (Video as a Service or in another word, to use the cloud for your video surveillance), **Cameramanager** showed how easy it is to use their VSaaS system-- saving a lot of money in installation cost and on-going repairs and service compared to an standard hardware/software surveillance.

**Ernitec** provided a range of high-end reliable units from analog Matrixes and cameras to IP servers and management software.
