The Remote Control Networked LED Bulb

Written by Marco Attard 26. 06. 2012

Insteon launches what it claims is the first-to-market networked remote control dimmable LED light bulb-- the Insteon LED Bulb 8 Watt (60W), featuring sleek design, simple installation and easy linkup to all Insteon controllers.

The bulb is fully dimmable and can be added to any number of scenes to easily create custom lighting. Like other Insteon devices, the bulb acts as a network signal repeater and sends signals over RF and powerline.

Customers can also control the light bulb via iOS and Android smartphone/tablet app.
